## BPKR

### SINGLE POLE CIRCUIT BREAKER WITH RETURN BUS DISTRIBUTION PANEL

Typical BPKR Model Shown

Circuit Breaker Distribution Panels are designed to provide protection for multiple load/distribution circuits.

The circuit breakers' fast trip response assures the panel breaker will trip before the main circuit breaker/fuse, so that power will not be interrupted from other critical DC loads if an overload occurs. Return Bus is conveniently located on the same panel to facilitate installation.

BPKR panels utilize UL recognized breakers with an interrupting capacity of 5,000 amps DC at 65 volts.
